On-The-Fly Sensitivity

If "On-The-Fly Sensitivity" has been assigned to a button, pressing that assigned button and moving the scroll wheel will produce a bar at the lower right-hand corner of your screen, allowing you to dynamically adjust your sensitivity settings. This feature requires the driver to be installed.

Software Update & Reset

Update the Razer driver and firmware software by clicking on the  button. This will connect you to www.razersupport.com for the latest driver/firmware downloads. You can also restore your current profile to the default settings by clicking on the  button.

6. Advanced Settings Guide

Acceleration

Acceleration is an internal filter of the driver, and is primarily a legacy option for low dpi mice users. With acceleration enabled, faster mouse movements cover additional on-screen distance. Windows has acceleration turned on by default as a convenience for users assuming that everyone will have 400DPI mice, but this will likely be a hindrance to most gamers and precision users who require greater accuracy.

DPI switcher - Resolution

Resolution is the number of counts per inch of movement sent by the mouse hardware to the OS. E.g. 400DPI means a movement of one inch will result in 400 counts of

movement. Without any of the above filters operating, this will result in 400 pixels of movement on the screen.

Independent X and Y-axis Settings

You can preset independent X-axis (sensitivity movements side to side) and Y-axis (sensitivity movements up and down). When this feature is enabled and On-The-Fly Sensitivity is used, a new on-the-fly interface bar that allows further sensitivity adjustments will appear on-screen.

Macros

A macro is a sequence of keystrokes executed in a particular order and timing. It allows you to execute a chain of commands, with the press of just one button for faster response in your games.

Polling Rate

The polling rate determines the time intervals that the PC retrieves data from your mouse. A higher value would mean shorter intervals and therefore less latency.

Profiles

A profile allows you to store your various settings such as button assignments as a single group for your convenience. In addition, you can also set your *TRON* Gaming Mouse to change profiles once a particular program is launched.

7. SAFETY AND MAINTENANCE

SAFETY GUIDELINES

In order to achieve maximum safety while using your TRON Gaming Mouse (Device), we suggest that you adopt the following guidelines:

1. Avoid looking directly at the laser beam of your mouse or pointing the beam in anyone else's eye. Note that the laser beam is NOT visible to the naked human eye and is set on an Always-On mode.
2. Should you have trouble operating the device properly and troubleshooting does not work, unplug the device and contact the Razer hotline or go to www.razersupport.com for support. Do not attempt to service or fix the device yourself at any time.
3. Do not take apart the device (doing so will also void your warranty) and do not attempt to service it yourself or operate it under abnormal current loads.
4. Keep your device away from liquid, humidity or moisture. Operate your device only within the specified temperature range of 0°C (32°F) to 40°C (104°F). Should you

operate it in a temperature that is beyond this range, unplug and switch off the device in order to let the temperature stabilize within the optimal temperature range.

COMFORT

Here are some tips to ensure that you are comfortable while using your device.

Research has shown that long periods of repetitive motion, improper positioning of your computer peripherals, incorrect body position, and poor habits may be associated with physical discomfort and injury to nerves, tendons, and muscles. Below are some guidelines to avoid injury and ensure optimum comfort while using your TRON Gaming Mouse.

5. Position your keyboard and monitor directly in front of you with your mouse next to it. Place your elbows next to your side, not too far away and your mouse within easy reach.
6. Adjust the height of your chair and table so that the keyboard and mouse are at or below elbow height.
7. Keep your feet well supported, posture straight and your shoulders relaxed.
8. During gameplay, relax your wrist and keep it straight. If you do the same tasks with your hands repeatedly, try not to bend, extend or twist your hands for long periods.
9. Do not rest your wrists on hard surfaces for long periods. Use a wrist rest to support your wrist while gaming.
10. Customize the buttons on your mouse to suit your style of gaming in order to minimize repetitive or awkward motions while gaming.
11. Make sure that your mouse fits comfortably in your hands.
12. Do not sit in the same position all day. Get up, step away from your desk and do exercises to stretch your arms, shoulders, neck and legs.
13. If you should experience any physical discomfort while using your mouse, such as pain, numbness, or tingling in your hands, wrists, elbows, shoulders, neck or back, please consult a qualified medical doctor immediately.

MAINTENANCE AND USE

The TRON Gaming Mouse is equipped with a laser sensor, which has a tracking beam that is invisible to the naked human eye. There is a little regular maintenance to keep the TRON Gaming Mouse in optimum condition. Once a month we recommend you unplug the device from the USB port and clean the lens below the TRON Gaming Mouse with a soft cloth or cotton swab. Use a little warm water but no soap or harsh cleaning agents.

To get the ultimate experience in movement and control, we highly recommend a premium mousing surface from Razer. Some surfaces will cause undue wear on the feet requiring constant care and eventual replacement.

Do note that the sensor of the TRON Gaming Mouse is 'tuned' or optimized especially for the TRON Gaming Mat & Razer mousing surfaces. This means that the sensor has

been tested extensively to confirm that the TRON Gaming Mouse reads and tracks best on Razer mousing surfaces. Other premium mousing surfaces from companies like Everglide™ may work just as well.
